

Vadim Vorotilov

Senior Web Developer

fant.geass@gmail.com

Summary

You can hire me on Upwork: <https://www.upwork.com/freelancers/~019d1748ed87505cd2>

If you're looking for a testing-infected developer who produces high quality code, that's me. I like programming and interested in long-term collaboration with the professionals.

Build solutions using Ruby/Elixir based frameworks, refactoring existing projects.

I'm well skilled in the following:

- Ruby, Ruby on Rails;
 - Elixir, Phoenix Framework;
 - Javascript (angular, react, vue, redux);
 - Databases (PostgreSQL, MySQL);
 - TDD, BDD (RSpec, factory_girl, ExUnit);
 - Implementing RESTful API;
 - Interaction with external APIs (Google API, Facebook API & etc);
 - DevOps (docker, ansible)
-

Experience

Senior Web Developer

January 2018 - Present

Senior Web Developer (remote) at WatchTower Benefits

May 2017 - September 2017 (5 months)

Tech stack: Rails/React.js

I was working as a full-stack web developer. My main responsibility was to develop React/Redux application and add new endpoints to the backend. The app had complex insurance domain interactions and my job was to implement them properly.

Senior Web Developer (remote) at Gleam.io

July 2015 - March 2016 (9 months)

Tech stack: Rails/Javascript/Postgres

<https://gleam.io/>

I was working as a full-stack web developer. My main responsibility was to add more integrations with various external services, like Mailchimp, Steam & etc. I've refactored previous implementation for that part of application, made it more extensible.

Senior Web Developer (remote)

December 2014 - April 2015 (5 months)

Tech stack: Rails/Postgres/Javascript

<https://promo.co/>

I was working as a full-stack web developer with more focus on the backend side. My responsibility was to create REST API backend application and some front web endpoints from scratch.

I used Rails API + service layer to move business logic out of the models. Test coverage was on a high level and the project was done in time.

Senior Web Developer (remote)

August 2014 - November 2014 (4 months)

Tech stack: Rails/Postgres/Redis

I was working as backend web developer. My main responsibility was developing new features for the backend of VoIP application, including new API endpoints and tests for them. Project has heavily used web sockets. Project's test coverage was on very high level.

Web Developer (remote)

July 2013 - June 2014 (1 year)

Tech stack: Rails/JQuery/Postgres

I was working as a full-stack web developer. My main responsibility was refactoring old codebase and applying new design to the crowd platform application.

Web Developer (remote)

March 2013 - June 2013 (4 months)

Tech stack: Rails/JQuery/MySQL

<https://www.hubworks.com.au/>

I was working as a full-stack web developer. My main job was adding new features for Child Content Management System(CCMS).

Web Developer at iBEC Systems

July 2011 - March 2013 (1 year 9 months)

Tech stack: PHP, Yii, Ruby on Rails, Javascript, jQuery, MySQL

I was working as a full-stack web developer. My responsibilities included developing applications from scratch, making architectural decisions and choosing right tools for the problems.

Junior Web Developer

May 2010 - July 2011 (1 year 3 months)

Tech stack: PHP/Yii/Javascript/jQuery/MySQL

My first company. I was working as a junior full-stack web developer.

I was helping building CMS for shops on Yii-framework + jQuery.

Education

Samarkand City Professional technical college of Tourism and household services

High School, information technology and network systems, 2007 - 2010
